

ARMOR ANYWHERE SHARED RESPONSIBILITY

PURPOSE-BUILT TO PROTECT WORKLOADS & DATA IN THE PUBLIC CLOUD

SECURE YOUR PORTION OF THE SHARED RESPONSIBILITY MODEL

The public cloud is effective for secure raw infrastructure, but public cloud customers are still tasked with managing and securing their workloads and data—their portion of the shared responsibility model. Armor reduces the burden of these challenges for your organization by sharing both risk and responsibility.

Purpose-built to achieve a secure and compliant posture for your workloads and data, Armor Anywhere makes it easy to balance security, cost-effectiveness, and cloud agility. The software also addresses compliance with major mandates such as PCI DSS, HIPAA, HITRUST, and GDPR.
