

# ARMOR'S PRIVATE CLOUD

Armor's private cloud is a secure and compliant, high-performance hosting infrastructure for organizations with mission-critical, sensitive applications and data.

- Private cloud infrastructure with 99.99% uptime
- Support for patching, vendor management, and monitoring
- Integrated security and compliance controls across your network and host

## THREAT DETECTION AND RESPONSE

Get advanced detection of threats to your applications and data. Go beyond alerting to receive a guided response from our Security Operations Center (SOC) experts.

## AUDIT-READY COMPLIANCE

Simplify compliance by meeting key controls in frameworks such as PCI DSS, HIPAA/HITRUST, and GDPR.

## PROTECTION FOR MISSION-CRITICAL APPLICATIONS AND DATA

Offload the headaches of managing infrastructure while getting the industry's leading protection for your most sensitive workloads.

**Simplify compliance with Armor's private cloud. Armor addresses controls across the following domains:**

- Physical Security
- Application Security
- Server Security
- Data Backup
- Security Audits
- Data Management
- Perimeter Security
- Network Security
- Administrative Security
- Secure Data Deletion
- Access Control
- Incident Response (IR)

**Simplify adherence to major compliance frameworks such as:**

PCI DSS | ISO27001 | HITRUST | AICPA SOC2

**ALWAYS HAVE A BACKUP PLAN:**

- Armor Business Continuity/Disaster Recovery Services
- Armor Advanced Backup
